fsPrmiseSAP

```
const fsPromises = require('fs').promises;
async function openAndClose() {
  let filehandle;
  try {
    filehandle = await fsPromises.open('thefile.txt', 'r');
  } finally {
    if (filehandle !== undefined)
      await filehandle.close();
  }
}
```

REPL top level await

A terminal window titled 'franzih — node — 80x24' showing a Node.js REPL session. The user enters 'node --version' and receives 'v10.11.0'. Then they enter 'node' to start the REPL. In the REPL, they enter a multi-line command: '> const file = await require('fs').promises.readFile('file.txt')'. The cursor is at the end of the command.

```
~$ node --version
v10.11.0
~$ node
> const file = await require('fs').promises.readFile('file.txt')
```

fs Promises API

```
const fsPromises = require('fs').promises;
async function openAndClose() {
  let filehandle;
  try {
    filehandle = await fsPromises.open('thefile.txt', 'r');
  } finally {
    if (filehandle !== undefined)
      await filehandle.close();
  }
}
```
