Google @fhinkel

## JavaScript, C++ and WebAssembly with Module from Ecripten

## Time to calculate one prime number

Seconds (lower is better)

n-th prime

@fhinkel

## SPEED, SPEED, SPEED

- Modern JavaScript is fast
  - No overhead for using different language
- Native C++ slightly faster
- WebAssembly almost native speed
  - Runs in browsers
- Don't blindly optimize. Always measure first.

## Time to calculate one prime number
